Survey Technologist – Powell River BC

Polaris is looking for an experienced survey/geomatics technologist to join our team. Polaris is a progressive firm with projects ranging from simple boundary markings, construction layouts, one lot subdivisions, through to large-scale stratas and land development. The Polaris model allows team members to work virtually from a home office or to make use of the Powell River workspace. A flexible schedule is a bonus of the Polaris model.

The Survey Technologist we're seeking should have some or all of the following skills:

- Survey calculations such as least squares adjustments, volumes, and alignments
- Field survey using robotic total station and GNSS equipment
- Experience in legal, topographic, and construction surveying
- Ability to communicate with team members, project managers, and clients
- Ability to work independently
- Physically fit and able to work in a variety of environments
- Experience with 3D laser scanning and UAV surveys is an asset

If you have all or some of these skills and you are self-motivated, enjoy working in a dynamic and progressive environment where quality of work and client service are at the forefront, Polaris is the team you have been looking for.

The ideal person for this opportunity would be based in Powell River to perform field work when required and perform office technical work on Polaris projects throughout our areas of operations.

This is a contract position where the contractor invoices on a monthly basis for services rendered. Earnings vary greatly depending upon hours, skills and tasks worked on.

Please contact Michael Rogers at mrogers@plsi.ca to learn more about this opportunity.
